

**Subject: MORTAR DATA SHEET**

Mortar for the Desana DURUS Systems can be sourced locally from masonry suppliers. Desana is no longer supplying mortar materials.

The typical and approved mortar for the DURUS Systems, when necessary, is an ASTM C270 Type N Mortar Cement with polymer additives for workability, density, increased resistance to cracking, better adhesion and flexibility. Sand as per ASTM C144 is typically included in a 50lb. bag.

Please contact Desana Partners or your masonry supplier with questions.
